

Aquascape™

# IonGen™

Provides Crystal  
Clear Water

Electronic Clarifier for Ponds and Pondless® Waterfall Systems

- Drastically reduces pond maintenance
- Crystal clear water without the use of chemicals
- Eliminates unsightly water conditions
- Simple to install
- Safe for fish and plants
- Not toxic to animals that may drink from the pond
- Energy efficient (less than \$1 a month in electricity cost)
- Treats ponds up to 25,000 gallons

## How does the IonGen™ work?

- The Aquascape IonGen™ releases a calculated mixture of copper, silver and zinc ions into the path of flowing water.
- The automatic control panel sends signals that slowly dissolve the replaceable metal probe. This unique combination of metal ions increases water quality, clarity and drastically reduces time consuming maintenance.

## Easy to Install:

1. Install the Aquascape IonGen™ flow chamber directly into the water feature plumbing or hide the chamber underwater in an area with significant water flow.

2. Mount the control panel.

3. Test the pond water with the included copper test strip and set ionization level.

## Features:

- Easy to use touch pad makes it simple to adjust the amount of ionization. Can be easily adjusted based on size of pond or water feature.
- Electronic indicator automatically notifies you when the probe needs replacing. The probe typically last 1-3 seasons depending on usage, quantity of water and water parameters of the water feature.
- Comes complete with electronic control panel, outdoor-rated transformer, 2" PVC flow chamber with replaceable probe, copper test kit and owner's manual.

# IonGen™

## Electronic Clarifier for Ponds and Pondless® Waterfall Systems

The Aquascape, Inc. IonGen™ is a water clarifier solution for ponds, Pondless® Waterfalls, and other decorative water features. The IonGen™ drastically reduces pond maintenance and provides crystal clear water without the use of chemicals. A microprocessor inside the IonGen™ control panel causes the outermost atoms of copper, silver, and zinc to lose an electron, creating a positive ion. The positive ion attempts to flow from one of the Probe's bars to the other and is swept away by the flow of water where the ion can begin to treat the water. The IonGen™ Probe is self cleaning, using reverse polarity to prevent scale and debris build-up on the Probe's bars. The metal alloys in the Probe are scientifically blended and tested to produce maximum results. The IonGen™ System is safe for fish and plants and is not toxic to any animals that may drink from the pond.
